That's correct. Both PFAS, and metals.

Connor

Connor, quick question – for Blades the HRS package documents observed releases of PFAS and inorganics, right? It's not being listed solely on PFAS, correct?

Joe,

Its been a while since we have had to provide updates, but let me know if this works.

Nonresponsive based on revised scope

Blades Groundwater:

EPA has completed the Site Inspection of the area surrounding two electroplating facilities. PFAS has continually been detected at 3 municipal and 8 residential wells above HA. PFAS contamination was identified in the groundwater surrounding the two electroplating facilities. DNREC continues to sample and provided in home well treatment to the residential homes that are affected. The Town of Blades continues to sample and manage the carbon units installed on the three municipal wells. Post-treatment sampling results continue to show PFAS is below the HA post treatment. During the SI, EPA installed and sampled; 19 new wells, 18 existing wells, 1 observation, 3 public wells owned by the town of Blades, and 9 co-located surface water and sediment samples. EPA has completed the Site Inspection Report and has sent the document to DNREC, the Town of Blades and the two electroplating facilities. The Draft HRS package is complete and was distributed to Headquarters for review. DNREC has confirmed they will want to list the Site on the National Priorities List.

Subject: PFAS sites - "salient"

Connor, Justin,

Yaz has asked me to begin coordinating PFAS information for the Fed Fac and Site Assessment Sections. That will largely entail periodic collection of site updates for PFAS sites throughout the Region and we will be working out exactly what Steve wants in a report-out as this coordination develops. For now though, Paul has asked the Branch to provide him with some talking points for the higher profile PFAS sites in each state so that he can refer to them during a State Directors Conference next week. I haven't been given a ton of guidance on what he wants but it has been described as "salient-like" write-ups for high profile PFAS sites and PFAS sites demonstrating a collaboration between EPA and the state or federal facility or accomplishments worth mentioning.

Could each of you send me a "salient" describing the PFAS sites you are working on and what type of collaboration you might be having with the state or other federal agency – Shepherd's Field, New Castle Air National Guard, and Oceana/Oceana Salvage come to mind as examples. Maybe just give one or two sentences to the issue at each site and then what we are doing or how we are working with the state and if any notable accomplishments have been reached.

I have to put the list of sites and statuses together by COB Friday, so if you can respond at your earliest convenience that would be great. Sorry for the vagueness. The request from the top is somewhat vague.

Thanks,
